Low Code Development VS Traditional application development approaches

AIM:

To compare traditional application development and low code application development based on their features, advantages and disadvantages.

Features of Traditional VS Low code:

Traditional Development	Low - code Development
* Required programming Knowledge.	* Minimal coding Required
* Developed using languages like java, python, C#, C++ etc.	* Uses drag and drop interfaces
* Longer developmat time.	* Faster development time.
* High flexibility and customization.	* Limited customization.
* Suitable for complex application.	* Suitable for simple to medium business application.

Advantage of Traditional VS Low Code:

Traditional Development:

* Highly customizable
* Suitable for large and complex projects
* Better control over application design and performance.
* Supports advantage integrations

Low-Code Development:

* Faster application development
* Required less coding Knowledge
* Reduces development cost
* Easy maintenance and updates.

Disadvantages of Traditional VS Low-Code:

Traditional Development:

* Time consuming
* Requires skilled developers
* Higher development and maintenance cost.
* Longer testing and deployment process.

Low-Code Development:

* Limited customization option
* Vendor dependency
* May not be suitable for highly complex application.
* Licensing costs for enterprise platforms.

Comparison of Traditional VS Low-code:

Traditional Development	Low-code Development
* Takes more time to develop applications.	* Develop applications much faster
* Requires strong programming skills.	* Requires little or no programming knowledge.
* Highly flexible and customizable	* Limited customization option
* Higher development and maintenance cost	* Lower development and maintenance cost

RESULT:

Jul 19/25

Traditional development offers high flexibility and customization, while low-code development enables faster application development with minimal coding. The suitable approach depends on the projects requirements.
